

Flowstate for M-VAVE FM-1

An instrument where a complete beginner can press almost any key, turn almost any performance knob, and make something that sounds intentional.

- Smart Keys
- Musical Guardrails
- Musical Worlds
- Deep Advanced Mode

Product promise: No wrong keys. No dangerous knobs. No blank page. Make something beautiful in under 30 seconds.

Five minutes to understand. Years of depth underneath.

PLAY MODE - default

Designed for people who know nothing about synthesizers or music theory.

- Choose a World
- Press Play
- Press any Smart Key
- Turn four feeling knobs
- Change Scene or Variation
- Record a loop
- Trigger live FX

ADVANCED MODE - optional

The same SLOOP engine, with the training wheels removed.

- Full synth engines and parameters
- Sequencer and pattern editing
- Drums, samples and effects
- Scales, chords and automation
- Macro and guardrail editing
- Create new Musical Worlds

CHOOSE
WORLD

PRESS
PLAY

PRESS
KEYS

TURN
4 KNOBS

MAKE IT
YOURS

“Turn this to choose music. Press Play. The keys fit. These four knobs change the feeling.”

0:30	Immediate success. User starts music, plays notes, and changes a macro.
2:00	Mental model learned. COLOR, MOTION, SPACE and ENERGY make intuitive sense.
5:00	Creative loop. User changes World/Scene/Variation, records a phrase and discovers an effect.

Three selectors + four permanent performance knobs

Conceptual mapping for PLAY MODE. Exact low-level bindings can be adjusted after the hardware/software audit.

Physical control	Beginner meaning	What actually happens underneath
WORLD	Choose the musical universe	Loads tempo, harmony, patterns, sounds, safe ranges and defaults.
SCENE	Move the arrangement forward	Quantized transition between authored sections.
VARIATION	Same idea, different feel	Applies curated pattern/sound/FX changes while preserving identity.
4 knobs	Change the feeling	Each knob drives many parameters through authored curves and guardrails.
EDIT hold	Go deeper	Enters full SLOOP editing and authoring.

The home screen answers four questions at a glance

Home answers:

What am I playing?

Neon Rain

What state is it in?

Playing, Scene B

Are the keys safe?

Smart Melody is active

What can I touch?

The four feeling controls are always visible.

World browser

Browsing rules

- One encoder scrolls directly through Worlds.
- Genre/category is secondary, never a required nested menu.
- Factory Worlds are read-only.
- Edited versions save as User Worlds.
- Current playback should not glitch while browsing.

Every key should feel intentional

PLAY MODE does not expose a raw chromatic keyboard by default. The World defines a safe scale, harmony, range and role.

Example: A minor pentatonic

Safe notes repeat across the keyboard. Chord tones are prioritized as harmony changes, while held notes remain stable.

Harmony-aware behavior

If the backing is on **Am**, chord tones A/C/E are emphasized. When harmony moves to **F**, F/A/C become preferred - without abruptly repitching notes already held.

Future Smart modes

- MELODY
- CHORDS
- BASS
- DRUMS

MELODY is the power-on default. Other modes are discoverable, not required.

The knobs never expose raw parameters

C

COLOR

Dark ↔ Bright

M

MOTION

Still ↔ Alive

S

SPACE

Close ↔ Huge

E

ENERGY

Sparse ↔ Intense

Macro	User hears	Possible hidden mappings
COLOR	Tone opens or darkens.	Filter cutoff, FM brightness, harmonic balance, sample filtering, saturation.
MOTION	Sound becomes more animated.	LFO depth/rate, arp activity, grain movement, drift, rhythmic modulation.
SPACE	Sound moves from close to cinematic.	Reverb send/decay, delay send/feedback, release, width.
ENERGY	Arrangement becomes fuller and stronger.	Layer activation, drum density, bass activity, pattern complexity, intensity, gain compensation.

Important: 100% SPACE does not mean “all reverb parameters at maximum.” It means “the biggest version of this World that its designer decided still sounds great.”

SPACE

CLOSE —————●————— HUGE

CLIFT

DBREAKDOWN

CHANGES NEXT BAR

Scenes

Scenes are authored structural states. Switching can change patterns, tracks, harmony, mix and FX - but waits for a musically sensible boundary.

- A Intro
- B Main groove
- C Lift / development
- D Breakdown / outro

VARIATION 03

✦

DREAMY

SAME WORLD · NEW FEEL

Variations

Curated or deterministic alternatives that preserve the World's identity.

- ORIGINAL

AIRY

DARK

PULSING

SPARSE

HEAVY

DREAMY

Variation can alter patterns, instrumentation, FX and macro defaults - not the core key/tempo/identity.

REC means “capture what I just played,” not “learn a sequencer”

Beginner recording guardrails

- Scale-safe notes
- Gentle quantization
- Prevent duplicate-note buildup
- Clamp impossible note lengths
- Respect polyphony limits
- Keep loop timing coherent
- Easy undo
- No grid editing required

Advanced Mode: the same captured material can later be opened in the full sequencer for detailed editing.

Existing synth functions become musical actions

FREEZE

00

Why rename on-screen?

The physical button may still say ARP or SEQ, but the display uses beginner language: **PULSE** and **BEAT**. The user learns by hearing the result, not by reading synthesis terminology.

Safety

Echo feedback, resonance, crush level and freeze behavior are bounded. There must always be a clean way back to a stable state.

The system protects musical intent, not just parameter limits

Notes

- Key/scale awareness
- Chord-tone priority
- Safe octaves
- Stable held notes

Sound

- Feedback caps
- Resonance limits
- Gain compensation
- No unstable combinations

Arrangement

- Bar/phrase transitions
- Density limits
- Compatible layers
- Clean fills and endings

Cross-macro example: if SPACE and ENERGY are both very high, reduce bass/drum reverb and delay feedback so the mix stays clear instead of turning into mud.

Discoverable depth without making it mandatory

SOUND SHAPE

SOFT	SHORT	BODY	TAIL
35	42	65	70

ENV button in PLAY MODE

MOVEMENT

DRIFT	WOBBLE	PULSE	RATE
20	15	30	42

LFO button in PLAY MODE

These pages can expose more control while keeping beginner-friendly labels. They are optional discoveries; nothing about the first-use experience depends on them.

ADVANCED MODE

FULL SLOOP CONTROL

ENTER / CANCEL

Advanced Mode exposes

Engines · FM parameters · envelopes · filters · LFOs · effects · sequencer · patterns · drums · samples · scales · chords · automation · mixer · macro mapping · guardrail configuration · Musical World authoring.

Each World is an instrument + arrangement + safety model

NEON RAIN

CINEMATIC · 72 BPM

Warm evolving pad
Deep drone bass
Expressive lead
Sparse electronic percussion

COLOR tone

MOTION modulation

SPACE cinematic size

ENERGY layers/intensity

MIDNIGHT DRIVE

RETRO / SYNTHWAVE

Analog chords
Driving bass
Retro drum kit
FM/chiptune lead

COLOR warmth

MOTION arp/pulse

SPACE delay/reverb

ENERGY groove density

FROZEN LAKE

AMBIENT

Long pad
Granular texture
Sparse bell
Minimal percussion

Slow harmony means even random sparse notes feel intentional.

DUSTY CAFE

LO-FI / CHILL

Warm keys
Dusty drums
Simple bass
Tape-like texture

Guardrails preserve swing, balance and warmth even at high ENERGY.

Factory Worlds are not prerecorded audio. They are live musical systems: sequences + synths + drums + harmony + scenes + effects + macro mappings + guardrails.

Develop and audition the same musical engine before flashing hardware

Simulator UI

Top World, genre, BPM, current Scene.	Performance Play, Rec, Pulse, Beat, FX.
Middle A/B/C/D Scene buttons + Variation selector.	Tracks Pad, Bass, Lead, Drums mute/level.
Controls COLOR, MOTION, SPACE, ENERGY.	Input Virtual Smart Keyboard + computer-key mapping.

KEYS: SMART MELODY

The product is successful when experimentation feels fearless

A beginner thinks...

- "Every key seems to work."
- "I turned SPACE and it became huge."
- "Scene C made the song lift."
- "I recorded something without knowing how looping works."
- "I can't really break it."

An advanced user thinks...

- "The beginner layer is just a performance surface."
- "I can edit the underlying SLOOP engine."
- "I can build my own World."
- "I can author macro curves and guardrails."
- "I can go as deep as I want."

Flowstate should feel less like programming a synthesizer and more like entering a musical environment that wants you to succeed.

1

Instant

Sound within seconds.

2

Safe

Keys, knobs and transitions remain musical.

3

Deep

Full SLOOP power is always underneath.

FLOWSTATE

Pick a World. Press Play. Make it yours.
